

README (SCENARIO 4)

In the csv file “scenario04_transmission_tree_strong_intervention.csv”, you may find patient records that belong to a branch of the entire transmission tree for scenario 4. The format of the data follows the same format of the patient records we provided for scenario 1. The patient records in this file are supposed to be checked and documented with higher precision than in the patient database, without missing entries.

This tree provide information on transmission occurred when both of safe burial protocols and Ebola Treatment Units were available in the country.
